Attn: G. O'Neal Hamilton

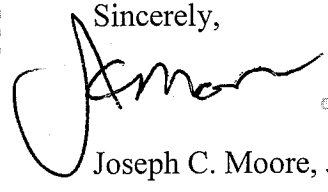

Dear Mr. Hamilton,

I am amazed that the utilities have managed to get a limit on solar expansion so that places like Furman University cannot expand their use of nonpolluting solar energy and cut power bills. We need our Public Utilities Commission to look at the big picture of certain climate change and the need to encourage, not discouraged alternative energy use.

Your first obligation should be to consumers and taxpayers who are going to have to finance the effects of climate change, including all the money our coastal state will pay in decades to come to deal with rising sea levels.

Please change the restrictive limit on solar expansion in South Carolina.

Sincerely,

Joseph C. Moore, Jr., MD
